

**INTRO. TO COMP. ENG.
CHAPTER III-1
BOOLEAN ALGEBRA**

•CHAPTER III

CHAPTER III

BOOLEAN ALGEBRA

- Boolean algebra is a form of algebra that deals with single digit binary values and variables.
- Values and variables can indicate some of the following binary pairs of values:
 - ON / OFF
 - TRUE / FALSE
 - HIGH / LOW
 - CLOSED / OPEN
 - 1 / 0

- Three fundamental operators in Boolean algebra
 - **NOT**: unary operator that complements represented as \bar{A} , A' , or $\sim A$
 - **AND**: binary operator which performs logical multiplication
 - i.e. **A ANDed with B** would be represented as AB or $A \cdot B$
 - **OR**: binary operator which performs logical addition
 - i.e. **A ORed with B** would be represented as $A + B$

NOT

A	\bar{A}
0	1
1	0

AND

A	B	AB
0	0	0
0	1	0
1	0	0
1	1	1

OR

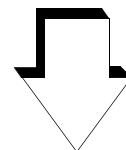

A	B	$A + B$
0	0	0
0	1	1
1	0	1
1	1	1

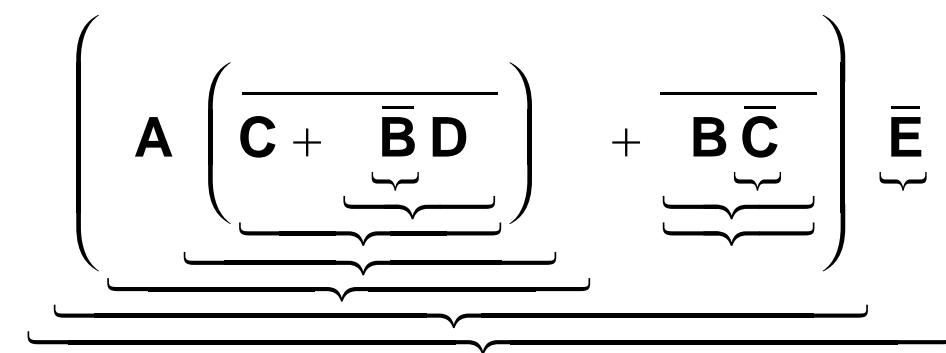

- Below is a table showing all possible Boolean functions F_N given the two-inputs **A** and **B**.

- Boolean expressions must be evaluated with the following order of operator precedence
 - parentheses
 - NOT
 - AND
 - OR

Example:

$$F = (A(\overline{C + \overline{B}D}) + \overline{B\overline{C}})\overline{E}$$

$$F = \left(A \left(\overline{C + \overline{B}D} \right) + \overline{B\overline{C}} \right) \overline{E}$$

- Example 1:

Evaluate the following expression when $A = 1$, $B = 0$, $C = 1$

$$F = C + \bar{C}B + B\bar{A}$$

- Solution

$$F = 1 + \bar{1} \cdot 0 + 0 \cdot \bar{1} = 1 + 0 + 0 = 1$$

- Example 2:

Evaluate the following expression when $A = 0$, $B = 0$, $C = 1$, $D = 1$

$$F = D(\overline{B\bar{C}A} + \overline{(AB + C)}) + C$$

- Solution

$$F = 1 \cdot (\overline{0 \cdot \bar{1} \cdot 0} + \overline{(0 \cdot 0 + 1)}) + 1 = 1 \cdot (0 + \bar{1} + 1) = 1 \cdot 1 = 1$$

BOOLEAN ALGEBRA

BASIC IDENTITIES

$$X + 0 = X$$

$$X \cdot 1 = X$$

Identity

$$X + 1 = 1$$

$$X \cdot 0 = 0$$

$$X + X = X$$

$$X \cdot X = X$$

Idempotent Law

$$X + X' = 1$$

$$X \cdot X' = 0$$

Complement

$$(X')' = X$$

Involution Law

$$X + Y = Y + X$$

$$XY = YX$$

Commutativity

$$X + (Y + Z) = (X + Y) + Z$$

$$X(YZ) = (XY)Z$$

Associativity

$$X(Y + Z) = XY + XZ$$

$$X + YZ = (X + Y)(X + Z)$$

Distributivity

$$X + XY = X$$

$$X(X + Y) = X$$

Absorption Law

$$X + X'Y = X + Y$$

$$X(X' + Y) = XY$$

Simplification

$$(X + Y)' = X'Y'$$

$$(XY)' = X' + Y'$$

DeMorgan's Law

$$\begin{aligned} XY + X'Z + YZ \\ = XY + X'Z \end{aligned}$$

$$\begin{aligned} & (X + Y)(X' + Z)(Y + Z) \\ & = (X + Y)(X' + Z) \end{aligned}$$

Consensus Theorem

- **Duality principle:**

- States that a Boolean equation remains valid if we take the dual of the expressions on both sides of the equals sign.
- The dual can be found by interchanging the **AND** and **OR** operators along with also interchanging the **0**'s and **1**'s.
- This is evident with the duals in the basic identities.
 - For instance: DeMorgan's Law can be expressed in two forms

$$(X + Y)' = X'Y' \quad \text{as well as} \quad (XY)' = X' + Y'$$

- Example: Simplify the following expression

$$F = BC + B\bar{C} + BA$$

- Simplification

$$F = B(C + \bar{C}) + BA$$

$$F = B \cdot 1 + BA$$

$$F = B(1 + A)$$

$$F = B$$

- Example: Simplify the following expression

$$F = A + \bar{A}B + \bar{A}\bar{B}C + \bar{A}\bar{B}\bar{C}D + \bar{A}\bar{B}\bar{C}\bar{D}E$$

- Simplification

$$F = A + \bar{A}(B + \bar{B}C + \bar{B}\bar{C}D + \bar{B}\bar{C}\bar{D}E)$$

$$F = A + B + \bar{B}C + \bar{B}\bar{C}D + \bar{B}\bar{C}\bar{D}E$$

$$F = A + B + \bar{B}(C + \bar{C}D + \bar{C}\bar{D}E)$$

$$F = A + B + C + \bar{C}D + \bar{C}\bar{D}E$$

$$F = A + B + C + \bar{C}(D + \bar{D}E)$$

$$F = A + B + C + D + \bar{D}E$$

$$F = A + B + C + D + E$$

- Example: Show that the following equality holds

$$\overline{A(\bar{B}\bar{C} + BC)} = \bar{A} + (\bar{B} + C)(\bar{B} + \bar{C})$$

- Simplification

$$\begin{aligned}\overline{A(\bar{B}\bar{C} + BC)} &= \bar{A} + \overline{(\bar{B}\bar{C} + BC)} \\ &= \bar{A} + (\overline{\bar{B}\bar{C}})(\overline{BC}) \\ &= \bar{A} + (\bar{B} + C)(\bar{B} + \bar{C})\end{aligned}$$

- Boolean expressions can be manipulated into many forms.
- Some standardized forms are required for Boolean expressions to simplify communication of the expressions.
- **Sum-of-products (SOP)**
 - Example:

$$F(A, B, C, D) = AB + \bar{B}C\bar{D} + AD$$

- **Products-of-sums (POS)**
 - Example:

$$F(A, B, C, D) = (A + B)(\bar{B} + C + \bar{D})(A + D)$$

STANDARD FORMS

MINTERMS

- The following table gives the minterms for a **three-input** system

A	B	C	m_0	m_1	m_2	m_3	m_4	m_5	m_6	m_7
			$\bar{A}\bar{B}\bar{C}$	$\bar{A}\bar{B}C$	$\bar{A}BC$	$\bar{A}B\bar{C}$	$A\bar{B}\bar{C}$	$A\bar{B}C$	$AB\bar{C}$	ABC
0	0	0	1	0	0	0	0	0	0	0
0	0	1	0	1	0	0	0	0	0	0
0	1	0	0	0	1	0	0	0	0	0
0	1	1	0	0	0	1	0	0	0	0
1	0	0	0	0	0	0	1	0	0	0
1	0	1	0	0	0	0	0	1	0	0
1	1	0	0	0	0	0	0	0	1	0
1	1	1	0	0	0	0	0	0	0	1

- **Sum-of-minterms** standard form expresses the Boolean or switching expression in the form of a **sum of products** using **minterms**.
 - For instance, the following Boolean expression using minterms

$$F(A, B, C) = \overline{A}\overline{B}\overline{C} + \overline{A}\overline{B}C + A\overline{B}\overline{C} + A\overline{B}C$$

could instead be expressed as

$$F(A, B, C) = m_0 + m_1 + m_4 + m_5$$

or more compactly

$$F(A, B, C) = \sum m(0, 1, 4, 5) = \text{one-set}(0, 1, 4, 5)$$

STANDARD FORMS

MAXTERMS

- The following table gives the maxterms for a **three-input system**

			M_0	M_1	M_2	M_3	M_4	M_5	M_6	M_7
A	B	C	$A + B + C$	$A + \bar{B} + C$	$\bar{A} + B + C$	$\bar{A} + \bar{B} + C$	$A + B + \bar{C}$	$A + \bar{B} + \bar{C}$	$\bar{A} + B + \bar{C}$	$\bar{A} + \bar{B} + \bar{C}$
			$A + B + \bar{C}$	$A + \bar{B} + \bar{C}$	$\bar{A} + B + \bar{C}$	$\bar{A} + \bar{B} + \bar{C}$	$\bar{A} + B + \bar{C}$	$\bar{A} + \bar{B} + \bar{C}$	$\bar{A} + B + \bar{C}$	$\bar{A} + \bar{B} + \bar{C}$
0	0	0	0	1	1	1	1	1	1	1
0	0	1	1	0	1	1	1	1	1	1
0	1	0	1	1	0	1	1	1	1	1
0	1	1	1	1	1	0	1	1	1	1
1	0	0	1	1	1	1	0	1	1	1
1	0	1	1	1	1	1	1	0	1	1
1	1	0	1	1	1	1	1	1	0	1
1	1	1	1	1	1	1	1	1	1	0

STANDARD FORMS

PRODUCT OF MAXTERMS

- STANDARD FORMS
 - MINTERMS
 - SUM OF MINTERMS
 - MAXTERMS

- **Product-of-maxterms** standard form expresses the Boolean or switching expression in the form of **product of sums** using **maxterms**.
 - For instance, the following Boolean expression using maxterms

$$F(A, B, C) = (A + B + \bar{C})(\bar{A} + B + C)(\bar{A} + \bar{B} + \bar{C})$$

could instead be expressed as

$$F(A, B, C) = M_1 \cdot M_4 \cdot M_7$$

or more compactly as

$$F(A, B, C) = \prod M(1, 4, 7) = \text{zero-set}(1, 4, 7)$$

- Given an arbitrary Boolean function, such as

$$F(A, B, C) = AB + \bar{B}(\bar{A} + \bar{C})$$

how do we form the canonical form for:

- **sum-of-minterms**
 - Expand the Boolean function into a sum of products. Then take each term with a missing variable **X** and **AND** it with **X + X̄**.
- **product-of-maxterms**
 - Expand the Boolean function into a product of sums. Then take each factor with a missing variable **X** and **OR** it with **XX̄**.

STANDARD FORMS

FORMING SUM OF MINTERMS

- STANDARD FORMS
 - MAXTERMS
 - PRODUCT OF MAXTERMS
 - MINTERM & MAXTERM

- Example

$$\begin{aligned}
 F(A, B, C) &= AB + \bar{B}(\bar{A} + \bar{C}) = AB + \bar{A}\bar{B} + \bar{B}\bar{C} \\
 &= AB(C + \bar{C}) + \bar{A}\bar{B}(C + \bar{C}) + (A + \bar{A})\bar{B}\bar{C} \\
 &= \bar{A}\bar{B}\bar{C} + \bar{A}\bar{B}C + A\bar{B}\bar{C} + ABC + A\bar{B}C \\
 &= \sum m(0, 1, 4, 6, 7)
 \end{aligned}$$

A	B	C	F
0	0	0	1 ← 0
0	0	1	1 ← 1
0	1	0	0
0	1	1	0
1	0	0	1 ← 4
1	0	1	0
1	1	0	1 ← 6
1	1	1	1 ← 7

Minterms listed as
1s in Truth Table

STANDARD FORMS

FORMING PROD OF MAXTERMS

- STANDARD FORMS
 - PRODUCT OF MAXTERMS
 - MINTERM & MAXTERM
 - FORM SUM OF MINTERMS

- Example

$$\begin{aligned}
 F(A, B, C) &= AB + \bar{B}(\bar{A} + \bar{C}) = AB + \bar{A}\bar{B} + \bar{B}\bar{C} \\
 &= (A + \bar{B})(A + \bar{B} + \bar{C})(\bar{A} + B + \bar{C}) \quad (\text{using distributivity}) \\
 &= (A + \bar{B} + C\bar{C})(A + \bar{B} + \bar{C})(\bar{A} + B + \bar{C}) \\
 &= (A + \bar{B} + C)(A + \bar{B} + \bar{C})(\bar{A} + B + \bar{C}) \\
 &= \prod M(2, 3, 5)
 \end{aligned}$$

A	B	C	F
0	0	0	1
0	0	1	1
0	1	0	0 ← 2
0	1	1	0 ← 3
1	0	0	1
1	0	1	0 ← 5
1	1	0	1
1	1	1	1

Maxterms listed as
0s in Truth Table

STANDARD FORMS

CONVERTING MIN AND MAX

- STANDARD FORMS
 - MINTERM & MAXTERM
 - SUM OF MINTERMS
 - PRODUCT OF MAXTERMS

- Converting between sum-of-minterms and product-of-maxterms
 - The two are complementary, as seen by the truth tables.
 - To convert interchange the Σ and \prod , then use missing terms.
 - Example: The example from the previous slides

$$F(A, B, C) = \sum m(0, 1, 4, 6, 7)$$

is re-expressed as

$$F(A, B, C) = \prod M(2, 3, 5)$$

where the numbers 2, 3, and 5 were missing from the minterm representation.

SIMPLIFICATION

KARNAUGH MAPS

- Often it is desired to simplify a Boolean function. A quick graphical approach is to use Karnaugh maps.

2-variable
Karnaugh map

A	B	0	1
0	0	0	0
1	0	1	

$$F = AB$$

3-variable
Karnaugh map

A	BC	00	01	11	10
0	0	0	1	1	0
1	0	1	1	1	1

$$F = AB + C$$

4-variable
Karnaugh map

CD	AB	00	01	11	10
00	00	0	1	0	0
01	01	0	1	0	0
11	11	1	1	1	1
10	10	0	1	0	0

$$F = AB + \bar{C}D$$

SIMPLIFICATION

KARNAUGH MAP ORDERING

- Notice that the ordering of cells in the map are such that moving from one cell to an adjacent cell only changes one variable.

**2-variable
Karnaugh map**

	B	0	1
A		0	1
	\bar{B}	2	3

**3-variable
Karnaugh map**

	BC	\bar{C}	C	\bar{C}
A		00	01	11
	\bar{B}	0	1	3
	B	4	5	2

**4-variable
Karnaugh map**

	CD	\bar{D}	D	\bar{D}
AB		00	01	11
	\bar{A}	00	01	3
	A	4	5	2
	\bar{B}	12	13	15
	B	1	7	6
	\bar{C}	8	9	11
	C	10	14	10

- This ordering allows for grouping of minterms/maxterms for simplification.

SIMPLIFICATION

IMPLICANTS

- **Implicant**
 - Bubble covering only 1s (size of bubble must be a power of 2).
- **Prime implicant**
 - Bubble that is expanded as big as possible (but increases in size by powers of 2).
- **Essential prime implicant**
 - Bubble that contains a 1 covered only by itself and no other prime implicant bubble.
- **Non-essential prime implicant**
 - A 1 that can be bubbled by more than one prime implicant bubble.

SIMPLIFICATION

PROCEDURE FOR SOP

- **Procedure for finding the SOP from a Karnaugh map**
 - Step 1: Form the 2-, 3-, or 4-variable Karnaugh map as appropriate for the Boolean function.
 - Step 2: Identify all essential prime implicants for 1s in the Karnaugh map
 - Step 3: Identify non-essential prime implicants for 1s in the Karnaugh map.
 - Step 4: For each essential and one selected non-essential prime implicant from each set, determine the corresponding product term.
 - Step 5: Form a sum-of-products with all product terms from previous step.

SIMPLIFICATION

EXAMPLE FOR SOP (1)

- Simplify the following Boolean function

$$F(A, B, C) = \sum m(0, 1, 4, 5) = \bar{A}\bar{B}\bar{C} + \bar{A}\bar{B}C + A\bar{B}\bar{C} + A\bar{B}C$$

- Solution:

		BC	00	01	11	10
		A	0	1	0	0
0	0	1	1	0	0	
	1	1	1	0	0	

zero-set(2, 3, 6, 7)
one-set(0, 1, 4, 5)

- The essential prime implicants are \bar{B} .
- There are no non-essential prime implicants.
- The sum-of-products solution is $F = \bar{B}$.

SIMPLIFICATION

EXAMPLE FOR SOP (2)

- SIMPLIFICATION
 - IMPLICANTS
 - PROCEDURE FOR SOP
 - EXAMPLE FOR SOP

- Simplify the following Boolean function

$$F(A, B, C) = \sum m(0, 1, 4, 6, 7) = \overline{A}\overline{B}\overline{C} + \overline{A}\overline{B}C + A\overline{B}\overline{C} + AB\overline{C} + ABC$$

- Solution:

		BC	00	01	11	10	
		A	0	1	1	0	0
0	0	1	1	0	0		
	1	1	0	1	1		

zero-set(2, 3, 5)
 one-set(0, 1, 4, 6, 7)

- The essential prime implicants are $\overline{A}\overline{B}$ and AB .
- The non-essential prime implicants are $\overline{B}\overline{C}$ or $A\overline{C}$.
- The sum-of-products solution is

$$F = AB + \overline{A}\overline{B} + \overline{B}\overline{C} \text{ or } F = AB + \overline{A}\overline{B} + A\overline{C}.$$

- **Procedure for finding the SOP from a Karnaugh map**
 - Step 1: Form the 2-, 3-, or 4-variable Karnaugh map as appropriate for the Boolean function.
 - Step 2: Identify all essential prime implicants for **0s** in the Karnaugh map
 - Step 3: Identify non-essential prime implicants for **0s** in the Karnaugh map.
 - Step 4: For each essential and one selected non-essential prime implicant from each set, determine the corresponding sum term.
 - Step 5: Form a product-of-sums with all sum terms from previous step.

SIMPLIFICATION

EXAMPLE FOR POS (1)

- SIMPLIFICATION
 - PROCEDURE FOR SOP
 - EXAMPLE FOR SOP
 - PROCEDURE FOR POS

- Simplify the following Boolean function

$$F(A, B, C) = \prod M(2, 3, 5) = (A + \bar{B} + C)(A + \bar{B} + \bar{C})(\bar{A} + B + \bar{C})$$

- Solution:

		BC	
		A	00 01 11 10
		0	1 1 0 0
		1	1 0 1 1

*zero-set(2, 3, 5)
one-set(0, 1, 4, 6, 7)*

- The essential prime implicants are $\bar{A} + B + \bar{C}$ and $A + \bar{B}$.
- There are no non-essential prime implicants.
- The product-of-sums solution is $F = (A + \bar{B})(\bar{A} + B + \bar{C})$.

SIMPLIFICATION

EXAMPLE FOR POS (2)

- SIMPLIFICATION
 - EXAMPLE FOR SOP
 - PROCEDURE FOR POS
 - EXAMPLE FOR POS

- Simplify the following Boolean function

$$F(A, B, C) = \prod M(0, 1, 5, 7, 8, 9, 15)$$

- Solution:

- The essential prime implicants

zero-set(0, 1, 5, 7, 8, 9, 15)

are $B + C$ and $\bar{B} + \bar{C} + \bar{D}$.

one-set(2, 3, 4, 6, 10, 11, 12, 13, 14)

- The non-essential prime implicants

can be $A + \bar{B} + \bar{D}$ or $A + C + \bar{D}$.

- The product-of-sums solution can be either

$$F = (B + C)(\bar{B} + \bar{C} + \bar{D})(A + \bar{B} + \bar{D})$$

or

$$F = (B + C)(\bar{B} + \bar{C} + \bar{D})(A + C + \bar{D})$$

Karnaugh map for $F(A, B, C, D)$ showing minterms 0, 1, 5, 7, 8, 9, 15. Prime implicants are circled: $B + C$ (red, rows 0, 1), $\bar{B} + \bar{C} + \bar{D}$ (blue, columns 1, 2, 3), $A + \bar{B} + \bar{D}$ (red, columns 0, 1, 2), and $A + C + \bar{D}$ (blue, columns 0, 1, 3).

		AB	CD		
		00	01	11	10
		0	0	1	1
00		0	0	0	1
01		1	0	0	1
11		1	1	0	1
10		0	0	1	1

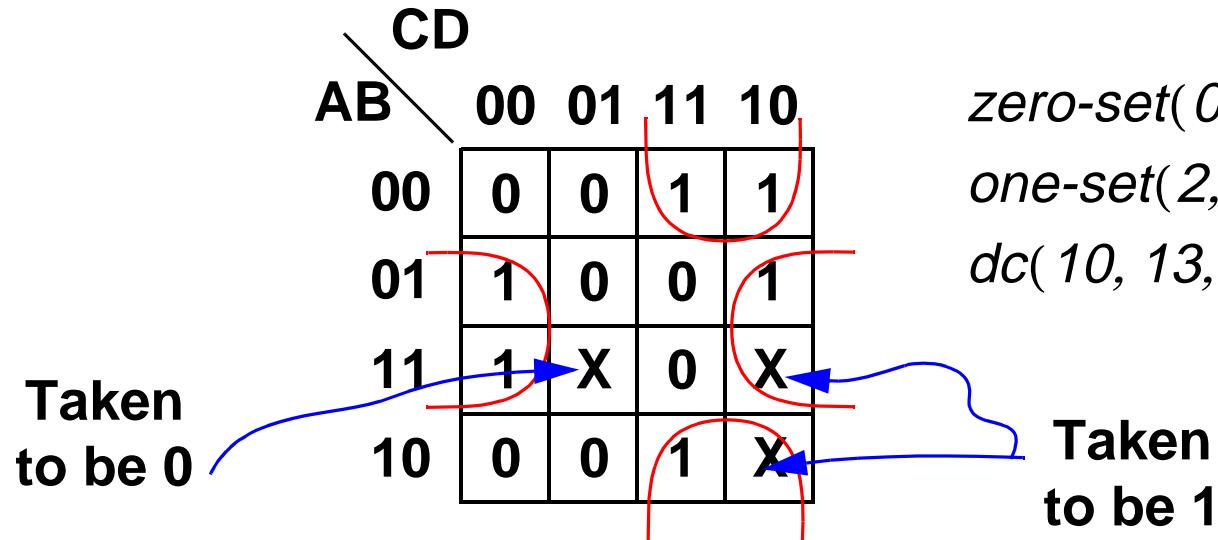

- Switching expressions are sometimes given as **incomplete**, or with **don't-care conditions**.
 - Having don't-care conditions can simplify Boolean expressions and hence simplify the circuit implementation.
 - Along with the *zero-set()* and *one-set()*, we will also have *dc()*.
 - Don't-cares conditions in Karnaugh maps
 - Don't-cares will be expressed as an “X” or “-” in Karnaugh maps.
 - Don't-cares can be bubbled along with the **1s** or **0s** depending on what is more convenient and help simplify the resulting expressions.

SIMPLIFICATION

DON'T-CARE EXAMPLE (1)

- SIMPLIFICATION
 - PROCEDURE FOR POS
 - EXAMPLE FOR POS
 - DON'T-CARE CONDITION

- Find the SOP simplification for the following Karnaugh map

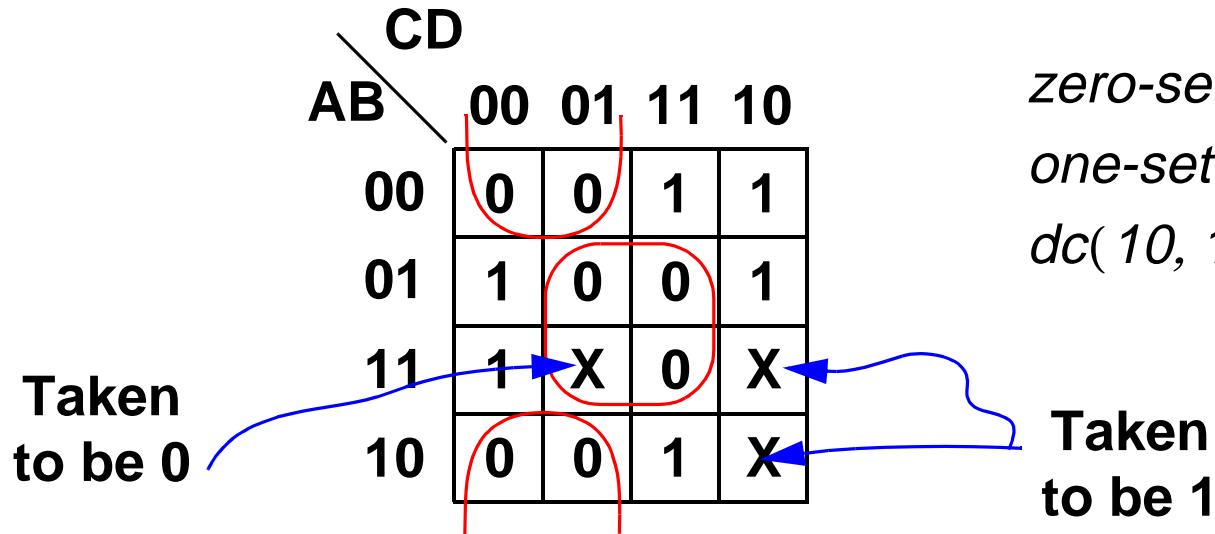

- Solution:
 - The essential prime implicants are $\bar{B}\bar{D}$ and $\bar{B}C$.
 - There are no non-essential prime implicants.
 - The sum-of-products solution is $F = \bar{B}C + \bar{B}\bar{D}$.

SIMPLIFICATION

DON'T-CARE EXAMPLE (2)

- SIMPLIFICATION
 - EXAMPLE FOR POS
 - DON'T-CARE CONDITION
 - DON'T-CARE EXAMPLE

- Find the POS simplification for the following Karnaugh map

zero-set(0, 1, 5, 7, 8, 9, 15)
 one-set(2, 3, 4, 6, 11, 12)
 dc(10, 13, 14)

- Solution:
 - The essential prime implicants are $B + C$ and $\bar{B} + \bar{D}$.
 - There are no non-essential prime implicants.
 - The product-of-sums solution is $F = (B + C)(\bar{B} + \bar{D})$.
